Datasheet for ABIN458903

anti-Elastase antibody

Overview

Abstract:

Background:

| Quantity: | 1 mg |
|------------------|---|
| Target: | Elastase |
| Reactivity: | Pig |
| Host: | Rabbit |
| Clonality: | Polyclonal |
| Conjugate: | This Elastase antibody is un-conjugated |
| Application: | ELISA, Western Blotting (WB), Immunofluorescence (IF) |
| Product Details | |
| Immunogen: | Elastase isolated and purified from porcine pancreas. Freund's complete adjuvant is used in the |
| | first step of the immunization procedure. |
| Specificity: | Cross-reactivities against enzymes of other sources may occur but have not been determined. |
| Characteristics: | Affinity purified antibodies of polyclonal rabbit antiserum to elastase from porcine panceas |
| Purification: | Specific polyclonal antibody fractions were prepared by solid phase affinity chromatography. |
| Target Details | |
| Target: | Elastase |

The reagents were evaluated for potency, purity and specificity using most or all of the

following techniques: immunoelectrophoresis, cross-immunoelectrophoresis, single radial

immunodiffusion (Ouchterlony), block titration, ELISA, immunoblotting and enzyme inhibition.

Elastase Products

Application Details

| Application Notes: | This product is intended for use in precipitating and non-precipitating antibody-binding assays (such as e.g., ELISA and Western blotting and immunofluorescence or histochemical |
|--------------------|---|
| | techniques), to prepare an insoluble immuno-affinity adsorbent, for labelling with a marker of |
| | the customer's own choice. |
| Restrictions: | For Research Use only |
| Handling | |
| Format: | Lyophilized |
| Concentration: | PAb concentration 1 mg/0.5ml. No foreign proteins added. |
| Buffer: | Purified hyperimmune rabbit IgG antibodies lyophilised from a solution in phosphate buffered |
| | saline (PBS, pH 7.2), stabilized with dextran. |
| Preservative: | Without preservative |
| Storage: | 4 °C/-20 °C |
| Storage Comment: | The lyophilised PAb fraction is shipped at ambient temperature and may be stored at +4°C, |
| | prolonged storage at or below -20°C. It is reconstituted by adding 0.5 ml sterile distilled water, |
| | spun down to remove insoluble particles, divided into small aliquots, frozen and stored at or |
| | below -20°C. Prior to use, an aliquot is thawed slowly at a mbient temperature, spun down |
| | again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, |
| | pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored |
| | at +4°C, not refrozen, and preferably used t he same day. If a slight precipitation occurs upon |
| | storage, this should be removed by centrifugation. It will not affect the performance of the |
| | product. |
