anti-Lactate Oxidase antibody (Biotin)

()	11/0	K\ /	iew	1
	\cup	ועוי	$\square \vee \vee$	ı

Abstract:

Overview			
Quantity:	1 mL		
Target:	Lactate Oxidase		
Reactivity:	Mycobacterium smegmatis		
Host:	Rabbit		
Clonality:	Polyclonal		
Conjugate:	This Lactate Oxidase antibody is conjugated to Biotin		
Application:	Western Blotting (WB), Immunofluorescence (IF), ELISA		
Product Details			
Immunogen:	Lactate oxidase isolated and purified from Mycobacterium smegmatis. Freund's complete		
	adjuvant is used in the first step of the immunization procedure.		
Isotype:	IgG		
Specificity:	Cross-reactivities against enzymes of other sources may occur but have not been determined.		
Characteristics:	Biotin-conjugated IgG fraction of polyclonal rabbit antiserum to lactate oxidase from		
	Mycobacterium smegmatis		
Purification:	The IgG (7S) fraction is prepared from the antiserum by ammonium sulphate precipitation and		
	ion exchange chromatography.		
Target Details			
Target:	Lactate Oxidase		

Lactate Oxidase Products

Target Details

Bac	kar	'nΙ	ın	Ч.
Duo		\sim	<i>.</i>	ч.

The reagents were evaluated for potency, purity and specificity using most or all of the following techniques: immunoelectrophoresis, cross-immunoelectrophoresis, single radial immunodiffusion (Ouchterlony), block titration, ELISA, immunoblotting and enzyme inhibition.

Application Details

Application Notes:

This product is intended for use in precipitating and non-precipitating antibody-binding assays (such as e.g., ELISA and Western blotting and immunofluorescence or histochemical techniques).

Restrictions:

For Research Use only

Handling

-	0	r	n	N	a	t:

Lyophilized

Concentration:

IgG protein concentration 10 mg/ml. Biotin/ IgG protein molar ratio (B/P) approximately 6.0. No foreign proteins added.

Buffer:

Biotin-coupled hyperimmune rabbit IgG lyophilised from a solution in phosphate buffered saline

(PBS, pH 7.2).

Preservative:

Without preservative

Storage:

4 °C/-20 °C

Storage Comment:

The lyophilised conjugate is shipped at ambient temperature and may be stored at +4°C, prolonged storage at or below -20°C. It is recons tituted by adding 1.0 ml sterile distilled water, spun down to remove insoluble particles, divided into small aliquots, frozen and stored at or below -20°C. Prior to use, an aliquot is thawed slowly at a mbient temperature, spun down again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored at +4°C, not refrozen, and preferably used t he same day. If a slight precipitation occurs upon storage, this should be removed by centrifugation. It will not affect the performance of the product.
