Datasheet for ABIN459284

anti-XDH antibody

Overview Quantity: 10 mg Target: **XDH** Reactivity: Cow Host: Rabbit Clonality: Polyclonal Conjugate: This XDH antibody is un-conjugated Application: Western Blotting (WB), ELISA, Immunofluorescence (IF) **Product Details** Xanthine oxidase is isolated and purified from bovine buttermilk. Freund's complete adjuvant is Immunogen: used in the first step of the immunization procedure. IgG Isotype: Specificity: Cross-reactivities against enzymes of other sources may occur but have not been determined. Characteristics: IgG fraction of polyclonal rabbit antiserum to xanthine oxidase from bovine buttermilk Purification: The IqG (7S) fraction is prepared from the antiserum by ammonium sulphate precipitation and ion exchange chromatography. **Target Details** XDH Target: Alternative Name: Xanthine Oxidase (XDH Products)

Target Details Background: The reagents were evaluated for potency, purity and specificity using most or all of the following techniques: immunoelectrophoresis, cross-immunoelectrophoresis, single radial immunodiffusion (Ouchterlony), block titration, ELISA, immunoblotting and enzyme inhibition. Positive Regulation of Endopeptidase Activity Pathways: **Application Details** This product is intended for use in precipitating and non-precipitating antibody-binding assays Application Notes: (such as e.g., ELISA and Western blotting and immunofluorescence or histochemical techniques), to prepare an insoluble immuno-affinity adsorbent, for labelling with a marker of the customer's own choice. Restrictions: For Research Use only Handling Format: Lyophilized Concentration: IgG protein concentration 10 mg/ml. No foreign proteins added. Buffer: Purified hyperimmune rabbit IgG lyophilised from a solution in phosphate buffered saline (PBS, pH 7.2). Preservative: Without preservative Storage: 4 °C/-20 °C Storage Comment: The lyophilised IgG fraction is shipped at ambient temperature and may be stored at +4°C, prolonged storage at or below -20°C. It is reconstituted by adding 1.0 ml sterile distilled water, spun down to remove insoluble particles, divided into small aliquots, frozen and stored at or below -20°C. Prior to use, an aliquot is thawed slowly at a mbient temperature, spun down

product.

again and used to prepare working dilutions by adding sterile phosphate buffered saline (PBS, pH 7.2). Repeated thawing and freezing should be avoided. Working dilutions should be stored

at +4°C, not refrozen, and preferably used the same day. If a slight precipitation occurs upon

storage, this should be removed by centrifugation. It will not affect the performance of the
