Datasheet for ABIN4955900 Human HSP Array C1

Image

### Overview

Quantity:	4 samples					
Reactivity:	Human					
Method Type:	Sandwich ELISA					
Application:	Antibody Array (AA)					
Product Details						
Purpose:	C-Series Human Heat Shock Protein Antibody Array Kit. Detects 9 Human heat shock proteins.					
	Suitable for all liquid sample types but intended for use with cell and tissue lysates.					
Sample Type:	Plasma, Cell Culture Supernatant, Serum, Cell Lysate, Tissue Lysate					
Analytical Method:	Semi-Quantitative					
Detection Method:	Chemiluminescent					
Specificity:	HSP10, HSP27, HSP32, HSP40, HSP60, HSP70, HSP90, GRP75, Ubiquitin+1					
Characteristics:	Easy to use					
	No specialized equipment needed					
	Compatible with nearly any liquid sample					
	<ul> <li>Proven technology (many publications)</li> </ul>					
	Highly sensitive (pg/mL)					
	Sandwich ELISA specificity					
	Higher density than ELISA, Western blot or bead-based multiplex					
Components:	Antibody Array Membranes					
	Biotinylated Detection Antibody Cocktail					
	Blocking Buffer					
Components:

	Wash Buffers 1 and 2
	Cell & Tissue Lysis Buffer
	Detection Buffers C and D
	Plastic Incubation Tray
	Protease Inhibitor Cocktail (in select kits)
Material not included:	Pipettors, pipet tips and other common lab consumables
	Orbital shaker or oscillating rocker
	Tissue Paper, blotting paper or chromatography paper
	Adhesive tape or Saran Wrap
	Distilled or de-ionized water
	A chemiluminescent blot documentation system (such as UVP's ChemiDoc-It $\ensuremath{^{ extsf{B}}}$ or EpiChem II
	Benchtop Darkroom), X-ray Film and a suitable film processor, or another chemiluminescent
	detection system.

# Application Details

Application Notes:	Perform ALL incubation and wash steps under gentle rotation or rocking motion (~0.5 to 1
	cycle/sec) using an orbital shaker or oscillating rocker to ensure complete and even
	reagent/sample coverage. Rocking/rotating too vigorously may cause foaming or bubbles to
	appear on the membrane surface which, should be avoided. All washes and incubations should
	be performed in the Incubation Tray (ITEM 10) provided in the kit. Cover the Incubation Tray
	with the lid provided during all incubation steps to avoid evaporation and outside debris
	contamination. Ensure the membranes are completely covered with sufficient sample or
	reagent volume during each incubation. Avoid forceful pipetting directly onto the membrane,
	instead, gently pipette samples and reagents into a corner of each well. Aspirate samples and
	reagents completely after each step by suctioning off excess liquid with a pipette. Tilting the
	tray so the liquid moves to a corner and then pipetting is an effective method. Optional
	overnight incubations may be performed for the following step to increase overall spot signal
	intensities:
	- Sample Incubation
	- Biotinylated Antibody Cocktail Incubation
	- HRP-Streptavidin Incubation
Comment:	The C-Series arrays feature chemiluminescent signal detection. The antibodies are spotted on
	nitrocellulose membrane solid supports and are handled in a very similar manner to Western
	blots.
	All C-Series arrays work on the sandwich ELISA principle, utilizing a matched pair of antibodies:

## Application Details

	an immobilized capture antibody and a corresponding biotinylated detection antibody.					
Sample Volume:	1 mL					
Plate:	Membrane					
Protocol:	1. Block membranes					
	2. Incubate with Sample					
	3. Incubate with Biotinylated Detection Antibody Cocktail					
	4. Incubate with HRP-Conjugated Streptavidin					
	5. Incubate with Detection Buffers					
	6. Image with chemiluminescent imaging system					
	7. Perform densitometry and analysis					
Restrictions:	For Research Use only					
Handling						
Handling Advice:	The antibody printed side of each membrane is marked by a dash (-) or number (#) in the upper					
	left corner. Do not allow membranes to dry out during the experiment or they may become					
	fragile and break OR high and/or uneven background may occur. Grasp membranes by the					
	corners or edges only using forceps. DO NOT touch printed antibody spots.					
Storage:	-20 °C					
Storage Comment:	For best results, store the entire kit frozen at -20°C upon arrival. Stored frozen, the kit will be					
	stable for at least 6 months which is the duration of the product warranty period. Once thawed,					
	store array membranes a -20°C and all other reagents undiluted at 4°C for no more than 3					
	months.
