Datasheet for ABIN4955910 Mouse Chemokine Array C1

1 Image

1 Publication

Overview

Quantity:	4 samples				
Reactivity: Mouse					
Method Type:	Type: Sandwich ELISA				
Application:	Antibody Array (AA)				
Product Details					
Purpose:	C-Series Mouse Chemokine Antibody Array 1 Kit. Detects 25 Mouse Chemokines. Suitable for all liquid sample types.				
Sample Type:	Plasma, Cell Culture Supernatant, Serum, Cell Lysate, Tissue Lysate				

Analytical Method:Semi-QuantitativeDetection Method:ChemiluminescentSpecificity:6Ckine (CCL21), BLC (CXCL13), CTACK (CCL27), CXCL16, Eotaxin-1 (CCL11), Eotaxin-2 (MPIF-
2/CCL24), Fractalkine (CX3CL1), I-TAC (CXCL11), KC (CXCL1), LIX, MCP-1 (CCL2), MCP-5, MDC
(CCL22), MIG (CXCL9), MIP-1 alpha (CCL3), MIP-1 gamma, MIP-2, MIP-3 beta (CCL19), MIP-3
alpha (CCL20), Platelet Factor 4 (CXCL4), RANTES (CCL5), SDF-1 (CXCL12), TARC (CCL17), I-
309 (TCA-3/CCL1), TECK (CCL25)

Characteristics:

- Easy to use
 - No specialized equipment needed
 - · Compatible with nearly any liquid sample
 - Proven technology (many publications)
 - Highly sensitive (pg/mL)
 - Sandwich ELISA specificity
 - Higher density than ELISA, Western blot or bead-based multiplex

Product Details

Components:	Antibody Array Membranes				
	Biotinylated Detection Antibody Cocktail				
	Blocking Buffer				
	Wash Buffers 1 and 2				
	Cell & Tissue Lysis Buffer				
	Detection Buffers C and D				
	Plastic Incubation Tray				
	Incubation Tray se Inhibitor Cocktail (in select kits)				
Material not included:	Pipettors, pipet tips and other common lab consumables				
Material not included:	Pipettors, pipet tips and other common lab consumables Orbital shaker or oscillating rocker				
Material not included:					
Material not included:	Orbital shaker or oscillating rocker				
Material not included:	Orbital shaker or oscillating rocker Tissue Paper, blotting paper or chromatography paper				
Material not included:	Orbital shaker or oscillating rocker Tissue Paper, blotting paper or chromatography paper Adhesive tape or Saran Wrap				
Material not included:	Orbital shaker or oscillating rocker Tissue Paper, blotting paper or chromatography paper Adhesive tape or Saran Wrap Distilled or de-ionized water				

Application Details

Application Notes:	Perform ALL incubation and wash steps under gentle rotation or rocking motion (~0.5 to 1
	cycle/sec) using an orbital shaker or oscillating rocker to ensure complete and even
	reagent/sample coverage. Rocking/rotating too vigorously may cause foaming or bubbles to
	appear on the membrane surface which, should be avoided. All washes and incubations should
	be performed in the Incubation Tray (ITEM 10) provided in the kit. Cover the Incubation Tray
	with the lid provided during all incubation steps to avoid evaporation and outside debris
	contamination. Ensure the membranes are completely covered with sufficient sample or
	reagent volume during each incubation. Avoid forceful pipetting directly onto the membrane,
	instead, gently pipette samples and reagents into a corner of each well. Aspirate samples and
	reagents completely after each step by suctioning off excess liquid with a pipette. Tilting the
	tray so the liquid moves to a corner and then pipetting is an effective method. Optional
	overnight incubations may be performed for the following step to increase overall spot signal
	intensities:
	- Sample Incubation
	- Biotinylated Antibody Cocktail Incubation
	- HRP-Streptavidin Incubation
Comment:	The C-Series arrays feature chemiluminescent signal detection. The antibodies are spotted on

Application	Details
-------------	---------

	nitrocellulose membrane solid supports and are handled in a very similar manner to Western					
	blots.					
	All C-Series arrays work on the sandwich ELISA principle, utilizing a matched pair of antibodies					
	an immobilized capture antibody and a corresponding biotinylated detection antibody.					
Sample Volume:	1 mL					
Plate:	Membrane					
Protocol:	1. Block membranes					
	2. Incubate with Sample					
	3. Incubate with Biotinylated Detection Antibody Cocktail					
	4. Incubate with HRP-Conjugated Streptavidin					
	5. Incubate with Detection Buffers					
	6. Image with chemiluminescent imaging system					
	7. Perform densitometry and analysis					
Restrictions:	For Research Use only					
Handling						
Handling Advice:	The antibody printed side of each membrane is marked by a dash (-) or number (#) in the uppe					
	left corner. Do not allow membranes to dry out during the experiment or they may become					
	fragile and break OR high and/or uneven background may occur. Grasp membranes by the					
	corners or edges only using forceps. DO NOT touch printed antibody spots.					
Storage:	-20 °C					
Storage Comment:	For best results, store the entire kit frozen at -20°C upon arrival. Stored frozen, the kit will be					
	stable for at least 6 months which is the duration of the product warranty period. Once thaweo					
	store array membranes and 1X Blocking Buffer a -20°C and all other reagents undiluted at 4°C					
	for no more than 3 months.					
	for no more than 3 months.
