	membrane-type, Ca2+-ATPase isoform 11, autoinhibited Ca2+-ATPase 11Arabidopsis thaliana,
	ACA11_ARATH.
	Background: In plant cells, the vacuole functions as a major calcium store. Although a
	calmodulin-regulated Ca2+-ATPase (ACA4) is known to be present in prevacuolar
	compartments, the presence of an ACA-type Ca2+-ATPase in the mature vacuole of a plant cell
	has not been verified. Here we provide evidence that ACA11 localizes to the vacuole membrane.
	ACA11 tagged with GFP was expressed in stable transgenic plants, and visualized in root cells
	and protoplasts by confocal microscopy. A Ca2+-ATPase function for ACA11 was confirmed by
	complementation of yeast mutants.
