Target Details	
Background:	Synonyms: NMA, BMP and activin membrane-bound inhibitor homolog, Non-metastatic gene A protein, Putative transmembrane protein NMA, BAMBI
	Background: BAMBI is a membrane spanning glycoprotein that acts as a negative regulator of
	TGF-beta signaling during development. The BAMBI family of proteins are related to type I TGF-
	beta receptor family, however, BAMBI is a pseudoreceptor that lacks an intracellular
	serine/threonine kinase domain. BAMBI transcription regulation is under the influence of beta-
	catenin, BMP, smad3 and smad4. BAMBI expression can increase in colorectal and
	hepatocellular carcinomas relative to non-cancerous tissues. BAMBI is expressed at high levels
	during odontogenesis. BAMBI is coexpressed with Bmp-4 during early Xenopus embryogenesis
	and can be detected in poorly metastatic human melanoma cell lines.
