Background:	Synonyms: AIBC 1, AIBC1, Amplified and overexpressed in breast cancer, BCAS 1, BCAS1,

Target Details

BCAS1_HUMAN, Breast carcinoma amplified sequence 1, Breast carcinoma-amplified sequence 1, Novel amplified in breast cancer 1.

Background: NaBC1 is a protein found amplified in most breast carcinoma forms. It is expressed primarily as a cytoplasmic, detergent-stable homodimer that has a tendency to interact with DYNLL1 (PIN) and DYNLL2. Breast tumor lines that exhibit 20q13.2 gene amplification express much higher levels of the protein as compared to the levels found in other breast cancer lines that do not overexpress the NaBC1 mRNA. However, this upregulation does not affect growth rate or anchoring abilities of a cell, indicating the oncogenic properties of NaBC1 differ from that of other oncogenes.
