|             | Background: The protein encoded by this gene is a member of the BTG/Tob family. This family      |
|             | has structurally related proteins that appear to have antiproliferative properties. This encoded |
|             | protein might play a role in neurogenesis in the central nervous system. Two transcript variants |
|             | encoding different isoforms have been found for this gene. [provided by RefSeq, Aug 2008].       |
