	encoding BZW2 maps to human chromosome 7. Chromosome 7 houses over 1,000 genes and
	comprises nearly 5 % of the human genome. Defects in some of the genes localized to
	chromosome 7 have been linked to Osteogenesis imperfecta, Pendred syndrome,
	Lissencephaly, Citrullinemia and Shwachman-Diamond syndrome. The deletion of a portion of
	the q arm of chromosome 7 is associated with Williams-Beuren syndrome, a condition
	characterized by mild mental retardation, an unusual comfort and friendliness with strangers
	and an elfin appearance. Deletions of portions of the q arm of chromosome 7 are also seen in a
	number of myeloid disorders, including cases of acute myelogenous leukemia and
	myelodysplasia.
