| | complex, which is involved in transcriptional activation of select genes principally by acetylation |

| | of nucleosomal histone H4 and H2A. The gene encoding MEAF6 localizes to chromosome 1 |
| | and, due to alternative splicing events, MEAF6 exists in at least three isoforms. Chromosome 1 |
| | is the largest human chromosome spanning about 260 million base pairs and making up 8 $\%$ of |
| | the human genome. There are about 3,000 genes on chromosome 1, and considering the great |
| | number of genes there are also a large number of diseases associated with chromosome 1 |
| | such as Hutchinson-Gilford progeria, Stickler syndrome, Parkinsons, Gaucher disease and |
| | Usher syndrome. |
