|             | Background: Representing about 2 % of human DNA, chromosome 20 consists of                |
|             | approximately 63 million bases and 600 genes. Chromosome 20 contains a region with        |
|             | numerous genes expressed in the epididymis, which are thought important for seminal       |
|             | production, and some viewed as potential targets for male contraception. The PRNP gene    |
|             | encoding the prion protein associated with spongiform encephalopathies, like Creutzfeldt- |
|             | Jakob disease, is found on chromosome 20. Amyotrophic lateral sclerosis, spinal muscular  |
|             | atrophy, ring chromosome 20 epilepsy syndrome and Alagille syndrome are also associated   |
|             | with chromosome 20. The C20orf117 gene product has been provisionally designated          |
|             | C20orf117 pending further characterization.   |
