Target Details

Background: Synonyms: CAPD2, Chromosome condensation-related SMC-associated protein 1, Chromosome-associated protein D2, CND1, Condensin, hCAP-D2, hCAPD2, CND1_HUMAN.
Background: CAPD2 is a regulatory subunit of the condensin complex, a complex required for conversion of interphase chromatin into mitotic-like condensed chromosomes. The condensin complex probably introduces positive supercoils into relaxed DNA in the presence of type I topoisomerases and converts nicked DNA into positive knotted forms in the presence of type II topoisomerases. It may target the condensin complex to DNA via its C-terminal domain (referenced from Swissprot).
