## Datasheet for ABIN4999206 anti-CCDC138 antibody (AA 551-665) (Alexa Fluor 680)

Overview

Quantity:	100 µL	
Target:	CCDC138	
Binding Specificity:	AA 551-665	
Reactivity:	Human	
Host:	Rabbit	
Clonality:	Polyclonal	
Conjugate:	This CCDC138 antibody is conjugated to Alexa Fluor 680	
Application:	Western Blotting (WB), Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p))	

## Product Details

Immunogen:	KLH conjugated synthetic peptide derived from human CCDC138
lsotype:	lgG
Cross-Reactivity:	Human
Predicted Reactivity:	Mouse,Rat,Dog,Cow,Pig,Horse,Rabbit
Purification:	Purified by Protein A.

## Target Details

Target:	CCDC138
Alternative Name:	CCDC138 (CCDC138 Products)

Target Details		
Background:	Synonyms: CCDC 138, CCDC138, Coiled coil domain containing 138, Coiled coil domain containing protein 138, coiled-coil domain containing 138, FLJ 32745, FLJ32745, CC138_HUMAN. Background: CCDC138, also known as FLJ32745, is a 685 amino acid protein expressed as two isoforms produced by alternative splicing. The gene that encodes CCDC138 maps to human chromosome 2q12.3. The second largest human chromosome, chromosome 2 consists of 237 million bases, encodes over 1,400 genes and makes up approximately 8 % of the human genome. A number of genetic diseases are linked to genes on chromosome 2. Harlequin icthyosis, a rare and morbid skin deformity, is associated with mutations in the ABCA12 gene. The lipid metabolic disorder sitosterolemia is associated with ABCG5 and ABCG8. An extremely rare recessive genetic disorder, Alstr syndrome is due to mutations in the ALMS1 gene. Interestingly, chromosome 2 contains what appears to be a vestigial second centromere and vestigial telomeres which gives credence to the hypothesis that human chromosome 2 is the result of an appient fusion of two apportant of proteins is apportant of proteins in the day in apportant of the proteins of two apportant of proteins is apportant of the proteins in the day in apportant of the proteins in the day in apportant of the proteins is determined of the proteins is determined of the proteins is the thomas chromosome 2 is the result of an appient fusion of two apportant of proteins is determined of the proteins of the proteins is determined of the proteins of two apportants of the proteins o	
Gene ID:	result of an ancient fusion of two ancestral chromosomes seen in modern form today in apes. 165055	
Pathways:	BCR Signaling	
Application Details		
Application Notes: Restrictions:	IF(IHC-P) 1:50-200 IF(IHC-F) 1:50-200 IF(ICC) 1:50-200 For Research Use only	
Handling	TO Research use only	
Format:	Liquid	
Concentration:	1 μg/μL	
Buffer:	Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.	
Preservative:	ProClin	
Precaution of Use:	This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only.	
Storage:	-20 °C
