	Background: This gene belongs to the chemokine-like factor gene superfamily, a novel family	
	that is similar to the chemokine and the transmembrane 4 superfamilies of signaling	
	molecules. This gene is one of several chemokine-like factor genes located in a cluster on	
	chromosome 16. Alternatively spliced transcript variants containing different 5' UTRs, but	
	encoding the same protein, have been identified. [provided by RefSeq, Jul 2008].
