Alternative Name:	CKS1 (CKS1B Products)
Background:	Synonyms: CDC2 associated protein CKS1, CDC28 protein kinase 1, CDC28 protein kinase 1B,

Target Details

CDC28 protein kinase regulatory subunit 1B, Cell division control protein CKS1, CKS 1, CKS1B, Ckshs1, Cyclin dependent kinases regulatory subunit 1, NB4 apoptosis/differentiation related protein, PNAS 143, PNAS 16, PNAS 18.

Background: CKS1 protein binds to the catalytic subunit of the cyclin dependent kinases and is essential for their biological function. The CKS1 mRNA is found to be expressed in different patterns through the cell cycle in HeLa cells, which reflects a specialized role for the encoded protein. At least two transcript variants have been identified for this gene, and it appears that only one of them encodes a protein.
