|  | Background: The coupling of ubiquitin conjugation to endoplasmic reticulum (ER) degradation  |
|--|--|
|  | (CUE) domain functions as a ubiquitin (UB) binding domain that is approximately 40 amino   |
|  | acids in length. Present in eukaryotic proteins that are involved in ubiquitination and protein  |
|  | trafficking pathways, CUE domains can bind monoubiquitin and may be required for ubiquitination of the proteins in which they are found. CUEDC1 (CUE domain-containing protein   |
|  | 1) is a 386 amino acid protein that contains one CUE domain, suggesting a possible role in   |
|  | protein trafficking and degradation pathways. Defects in the gene encoding CUEDC1 may be   |
|  | associated with early stage cervical cancer, implicating CUEDC1 as a potential tumor marker.   |
|  | Two isoforms of CUEDC1 exist due to alternative splicing events.   |
