Alternative Name:	DAB2 (DAB2 Products)
Background:	Synonyms: DOC2, DOC-2, Disabled homolog 2, Adaptor molecule disabled-2, Differentially
	expressed in ovarian carcinoma 2, Differentially-expressed protein 2, DAB2
	Background: Adapter protein that functions as clathrin-associated sorting protein (CLASP)
	required for clathrin-mediated endocytosis of selected cargo proteins. Can bind and assemble
	clathrin, and binds simultaneously to phosphatidylinositol 4,5-bisphosphate (PtdIns(4,5)P2) an
	cargos containg non-phosphorylated NPXY internalization motifs, such as the LDL receptor, to
	recruit them to clathrin-coated pits. Can function in clathrin-mediated endocytosis
	independently of the AP-2 complex. Involved in endocytosis of integrin beta-1, this function
	seems to redundant with the AP-2 complex and seems to require DAB2 binding to endocytosis
	accessory EH domain-containing proteins such as EPS15, EPS15L1 and ITSN1. Involved in
	endocytosis of cystic fibrosis transmembrane conductance regulator/CFTR. Involved in
	endocytosis of megalin/LRP2 lipoprotein receptor during embryonal development. Required fo
	recycling of the TGF-beta receptor. Involved in CFTR trafficking to the late endosome. Involved
	in several receptor-mediated signaling pathways. Involved in TGF-beta receptor signaling and
	facilitates phosphorylation of the signal transducer SMAD2. Mediates TFG-beta-stimulated JN
	activation. May inhibit the canoniocal Wnt/beta-catenin signaling pathway by stabilizing the
	beta-catenin destruction complex through a competing association with axin preventing its
	dephosphorylation through protein phosphatase 1 (PP1). Sequesters LRP6 towards clathrin-
	mediated endocytosis, leading to inhibition of Wnt/beta-catenin signaling. May activate non-
	canonical Wnt signaling.
