Background:	Synonyms: hDx-1, E3 ubiquitin-protein ligase DTX1, Protein deltex-1, Deltex1, hDTX1, DTX1 Background: Functions as a ubiquitin ligase protein in vivo, mediating ubiquitination and		
	promoting degradation of MEKK1, suggesting that it may regulate the Notch pathway via some		
	ubiquitin ligase activity (By similarity). Regulator of Notch signaling, a signaling pathway		
	involved in cell-cell communications that regulates a broad spectrum of cell-fate determinations. Mainly acts as a positive regulator of Notch, but it also acts as a negative		
	regulator, depending on the developmental and cell context. Mediates the antineural activity of		
	Notch, possibly by inhibiting the transcriptional activation mediated by MATCH1. Involved in		
	neurogenesis, lymphogenesis and myogenesis, and may also be involved in MZB (Marginal		
	zone B) cell differentiation. Promotes B-cell development at the expense of T-cell development,		
	suggesting that it can antagonize NOTCH1.
