## Datasheet for ABIN5001372 anti-DNAH9 antibody (AA 3001-3200) (Alexa Fluor 750)

Overview

| Quantity:            | 100 μL                                                                                                  |  |
|----------------------|---------------------------------------------------------------------------------------------------------|--|
| Target:              | DNAH9                                                                                                   |  |
| Binding Specificity: | AA 3001-3200                                                                                            |  |
| Reactivity:          | Human                                                                                                   |  |
| Host:                | Rabbit                                                                                                  |  |
| Clonality:           | Polyclonal                                                                                              |  |
| Conjugate:           | This DNAH9 antibody is conjugated to Alexa Fluor 750                                                    |  |
| Application:         | Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p)) |  |

## Product Details

| Immunogen:            | KLH conjugated synthetic peptide derived from human DNAH9 |
|-----------------------|-----------------------------------------------------------|
| Isotype:              | IgG                                                       |
| Predicted Reactivity: | Human,Mouse,Rat,Dog,Horse                                 |
| Purification:         | Purified by Protein A.                                    |

## Target Details

| Target:           | DNAH9                                                                                        |  |
|-------------------|----------------------------------------------------------------------------------------------|--|
| Alternative Name: | DNAH9 (DNAH9 Products)                                                                       |  |
| Background:       | Synonyms: Dynein heavy chain, Axonemal beta dynein heavy chain 9, Ciliary dynein heavy chain |  |

Background: Dyneins are multisubunit, high molecular weight ATPases that interact with microtubules to generate force by converting the chemical energy of ATP into the mechanical energy of movement. Cytoplasmic or axonemal Dynein heavy, intermediate, light and light-intermediate chains are all components of minus end-directed motors, the complex transports cellular cargos towards the central region of the cell. Axonemal dynein motors contain one to three non-identical heavy chains and cause a sliding of microtubules in the axonemes of cilia and flagella in a mechanism necessary for cilia to beat and propel the cell. DNAH9 (Dynein, axonemal, heavy chain 9), also known as DYH9, HL20, DNEL1, Dnahc9 or DNAH17L, is a member of the Dynein heavy chain family and comprises one of the heavy chain subunits of axonemal Dynein. DNAH9 consists of an N-terminal stem which is responsible for interacting with other Dynein components and binding cargo, and four P-loops that comprise the motor domain at its C-terminus.

## Application Details

| Application Notes: | IF(IHC-P) 1:50-200                                                                           |
|--------------------|----------------------------------------------------------------------------------------------|
|                    | IF(IHC-F) 1:50-200                                                                           |
|                    | IF(ICC) 1:50-200                                                                             |
| Restrictions:      | For Research Use only                                                                        |
| Handling           |                                                                                              |
| Format:            | Liquid                                                                                       |
| Concentration:     | 1 µg/µL                                                                                      |
| Buffer:            | Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and |
|                    | 50 % Glycerol.                                                                               |
| Preservative:      | ProClin                                                                                      |
| Precaution of Use: | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be          |
|                    | handled by trained staff only.                                                               |
| Storage:           | -20 °C                                                                                       |
