Background:	Synonyms: LIC1, DNCLI1, Cytoplasmic dynein 1 light intermediate chain 1, Dynein light chain A, DLC-A, Dynein light intermediate chain 1, cytosolic, DYNC1LI1 Background: Acts as one of several non-catalytic accessory components of the cytoplasmic dynein 1 complex that are thought to be involved in linking dynein to cargos and to adapter proteins that regulate dynein function. Cytoplasmic dynein 1 acts as a motor for the intracellular retrograde motility of vesicles and organelles along microtubules. May play a role in binding dynein to membranous organelles or chromosomes. Probably involved in the microtubule-dependent transport of pericentrin. Is required for progress throut the spindle assembly checkpoint. The phosphorylated form appears to be involved in the selective removal
