Target Details	
Alternative Name:	SCARB2 (SCARB2 Products)
Background:	The lysosomal integral membrane protein 2 (LIMP2) is a heavily glycosylated type III
	transmembrane protein, the majority of which exists in the lumen of the lysosome and a
	cytoplasmic domain of approximately 20 amino acids. A deficiency of LIMP2 in mice causes
	uretic pelvic junction obstruction, deafness, and peripheral neuropathy associated with
	impaired vesicular trafficking and distribution of apically expressed proteins. More recently,
	LIMP2 was shown to act as a receptor to bind b-glucocerebrosidase, the enzyme defective in
	Gaucher disease, a lysosomal storage disorder. LIMP2-deficient mice showed missorted as
	well as secreted b-glucocerebrosidase, suggesting that LIMP2 also functions as the mannose-
	6-phosphate-independent trafficking receptor. Despite its predicted molecular weight, LIMP2
	runs at approximately 80 - 85 kDa in SDS-PAGE.Synonyms: 85 kDa lysosomal membrane
