

Datasheet for ABIN5001987 anti-RAPGEF3 antibody (AA 301-400) (AbBy Fluor® 750)

Overview

| Quantity: | 100 µL |
|----------------------|---|
| Target: | RAPGEF3 |
| Binding Specificity: | AA 301-400 |
| Reactivity: | Human, Rat |
| Host: | Rabbit |
| Clonality: | Polyclonal |
| Conjugate: | This RAPGEF3 antibody is conjugated to AbBy Fluor® 750 |
| Application: | Immunofluorescence (Cultured Cells) (IF (cc)), Immunofluorescence (Paraffin-embedded Sections) (IF (p)) |

Product Details

| Immunogen: | KLH conjugated synthetic peptide derived from human Epac1 |
|-----------------------|---|
| Isotype: | lgG |
| Cross-Reactivity: | Human, Rat |
| Predicted Reactivity: | Mouse,Rabbit |
| Purification: | Purified by Protein A. |
| | |
| Target Details | |

| Target: | RAPGEF3 |
|-------------------|--------------------------|
| Alternative Name: | Epac1 (RAPGEF3 Products) |

| cAMP 1, Exchange protein directly activated by cAMP 1, MGC21410, RAP guanine nucleotide exchange factor 3, Rap1 guanine nucleotide exchange factor GEF 3, RAP guanine nucleotide exchange factor 3, Rap1 guanine nucleotide exchange factor directly activated by cAMP, RAPGEF3. Background. The activation of RaP1 by cAMP is independent of PKA and is mediated by recently discovered family of guanine nucleotide exchange factors (GEFs) called cAMP-GEFa c Epacs. The Epac signaling therefore represents a novel mechanism for cAMP signaling with in the CAMP cascade. There are 2 members of the Epac family, Epac1 and Epac 2. Both proteins are multidomain proteins containing an autoinhibtory cAMP-binding domain that inhibits the catalytic region and a DEP domain (disheveled, EgI-10 and pleckstrin homology domain) targeling the membrane anchors. EPAC2 has an additional cAMP-binding site in its N-terminus that binds cAMP with low affinity. EPAC1 mRNA is broadly expressed, with particularly high levels occurring in the thytoid, overy, kidney and certain brain regions, whereas expression of EPAC2 mRNA appears to be restricted to the brain and adrenal glands. Epac2 also an unique antigenic asequences form near N-terminus and between ResOEFN and Ras GEF domains. The to Epac Tare affinity purified over immobilized antigen based chromatography. Gene ID: 1019 Pathways: cAMP Metabolic Process Application Notes: IF(IHC-P) 1:50-200 IF(UC) 1:50-200 I | Target Details | |

Handling

| | 50 % Glycerol. |
|--------------------|--|
| Preservative: | ProClin |
| Precaution of Use: | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only. |
| Storage: | -20 °C |
| Storage Comment: | Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles. |
| Expiry Date: | 12 months |
