	for vesicle trafficking and membrane link) domain-containing proteins. It is a nuclear-localized
	protein that is widely expressed in normal human tissues. While it has been reported to be
	overexpressed in colon cancer, MARVELD1 protein levels are generally lower in several primary
	tumors including ovary, breast, kidney, bladder and liver. This lower level of MARVELD1
	expression in tumors is thought to be due to a higher methylation status of the MARVELD1
	promoter as treatment of MDA-MB-361 with 5-aza-2'-deoxycytidine restores MARVELD1
	expression (1,3), suggesting that loss of MARVELD1 expression may contribute to
	tumorgenicity.Synonyms: MARVEL domain-containing protein 1, MRVLDC1
