|                     | Background: Endoplasmic reticulum-anchored autophagy receptor that mediates ER delivery     |
|                     | into lysosomes through sequestration into autophagosomes (PubMed:26040720). Promotes        |
|                     | membrane remodeling and ER scission via its membrane bending capacity and targets the       |
|                     | fragments into autophagosomes via interaction with ATG8 family proteins                     |
|                     | (PubMed:26040720). Required for long-term survival of nociceptive and autonomic ganglion    |
