Background:	Synonyms: FAM21A, Family with sequence similarity 21 member C, Hypothetical protein	
	LOC253725, KIAA0592, Protein FAM21C, FA21C_HUMAN.	
	Background: Playing a essential role in the fission of tubules that serve as transport	
	intermediates during endosome sorting, the WASH complex is present at the surface of	
	endosomes and functions to recruit and activate the Arp2/3 complex for induction of actin	
	polymerization. FAM21, Putative WASH complex subunit FAM21, is a component of the WASH	
	complex. Having undergone evolutionary duplication, four highly homologous family members	
	exist including FAM21A, FAM21B, FAM21C and FAM21D. FAM21 links the WASH complex to	
	endosomes and is required for WASM-dependent retromer-mediated sorting. Also, by directly	
	interacting with CapZ, FAM21 inhibits its anti-capping activity, thereby regulating actin	
	dynamics.
