	members possess broad mitogenic and cell survival activities, and are involved in a variety of
	biological processes, including embryonic development, cell growth, morphogenesis, tissue
	repair, tumor growth, and invasion. It has been shown in vitro that this protein is able to induce
	neurite outgrowth in PC12 cells. Studies of the similar proteins in mouse and chick suggested
	that this protein is a pleiotropic growth factor that stimulates proliferation in a number of
	tissues, most notably the liver and small intestine. Knockout studies of the similar gene in mice
	implied the role of this protein in regulating proliferation and differentiation of midline cerebellar
	structures.
