Target Details	
Background:	Synonyms: 5-bisphosphate 5-phosphatase, Fig4, FIG4_HUMAN, KIAA0274, ALS11,
	Phosphatidylinositol 3, hSac3, Phosphatidylinositol 3,5 bisphosphate 5 phosphatase,
	Polyphosphoinositide phosphatase, SAC domain containing protein 3, SAC domain-containing
	protein 3, SAC3.
	Background: FIG4 is a 907 amino acid protein that contains one SAC domain through which it is
	thought to function as a phosphoinositide phosphatase that may play an important role in
	signal transduction and vesicle trafficking. Defects in the gene encoding FIG4 are the cause of
	Charcot-Marie-Tooth disease type 4J (CMT4J) and amyotrophic lateral sclerosis type 11
	(ALS11), both of which negatively affect the nervous system. CMT4J is a recessive
	demyelinating disorder of the peripheral nervous system and is characterized by reduced motor
	nerve conduction velocities and axonal degeneration. Unlike CMT4J, ALS11 is characterized by
	the degeneration of upper motor neurons in the brain and lower neurons in the spinal cord,
	causing paralysis and, ultimately, death.
Pathways:	Inositol Metabolic Process
