Background:	Synonyms: ABPA, ABPL, FLN2, MFM5, MPD4, ABP-280, ABP280A, Filamin-C, FLN-C, FLNc, ABP-280-like protein, ABP-L, Actin-binding-like protein, Filamin-2, Gamma-filamin Background: Muscle-specific filamin, which plays a central role in muscle cells, probably by
	functioning as a large actin-cross-linking protein. May be involved in reorganizing the actin
	cytoskeleton in response to signaling events, and may also display structural functions at the Z
	lines in muscle cells. Critical for normal myogenesis and for maintaining the structural integrity of the muscle fibers.
