Target Details

Background:	Synonyms: AKT interacting protein, AKT-interacting protein, AKTIP, AKTIP_HUMAN, FT 1, FT1,
	Fused toes homolog, Fused toes protein homolog.
	Background: Fused toes protein homolog (FTS), also known as AKT-interacting protein (AKTIP)
	and Ft1, is a 292 amino acid protein that localizes to the cytoplasm and the cell membrane. A
	member of the ubiquitin-conjugating enzyme family, FTS binds directly to AKT1 to regulate
	apoptosis in a cell population. AKT1 is a protein that plays a critical role in a number of cellular
	responses, such as cell growth, protein synthesis, and antiapoptotic signaling. The interaction
	of FTS and AKT1 enhances the phosphorylation and activation of AKT1, which, through an
	AKT1/GSK-3/NFATc1 signaling cascade, results in the increased production of the
	proapoptotic hormone Fas ligand and thus an increase in apoptosis.
