## Datasheet for ABIN5003525 anti-GNE antibody (Alexa Fluor 680)

Overview

| Overview          |   |
|-------------------|---|
| Quantity:         | 100 μL  |
| Target:           | GNE   |
| Reactivity:       | Human, Mouse, Rat   |
| Host:             | Rabbit  |
| Clonality:        | Polyclonal  |
| Conjugate:        | This GNE antibody is conjugated to Alexa Fluor 680                                |
| Application:      | Western Blotting (WB), Immunofluorescence (Paraffin-embedded Sections) (IF (p))   |
| Product Details   |   |
| Immunogen:        | KLH conjugated synthetic peptide derived from human GLCNE                         |
| lsotype:          | lgG   |
| Cross-Reactivity: | Human, Mouse, Rat   |
| Purification:     | Purified by Protein A.  |
| Target Details    |   |
| Target:           | GNE   |
| Alternative Name: | GLCNE (GNE Products)  |
| Background:       | Synonyms: IBM2, Uae1, Bunctional UDP N acetylglucosamine 2 epimerase/N            |
|                   | acetylmannosamine kinase, DMRV, ManAc kinase, N acylmannosamine kinase, NM, RP23- |
|                   | 209M8.6, UDP GlcNAc 2 epimerase, UDP GlcNAc 2 epimerase/ManAc kinase, Uridine     |
|                   | disheeshete Neestylalyseesting 2 enimeroog CLONE LUNAAN                           |

diphosphate N acetylglucosamine 2 epimerase, GLCNE\_HUMAN.

| Background: The bifunctional enzyme UDP-N-acetylglucosamine 2-epimerase/N-                           |
|--|
| acetylmannosamine kinase (GNE/Mnk), or GLCNE, regulates and initiates biosynthesis of N-             |
| acetylneuraminic acid (NeuAc), a precursor of sialic acids. GLCNE is required for normal             |
| sialylation in hematopoietic cells. Sialylation is implicated in cell adhesion, signal transduction, |
| tumorigenicity and metastatic behavior of malignant cells. It is upregulated after PKC-              |
| dependent phosphorylation and is most abundantly expressed in liver and placenta. It is also         |
| expressed, to a lesser extent, in heart, brain, lung, kidney, skeletal muscle and pancreas. Defects  |
| in GLCNE are the cause of sialuria, inclusion body myopathy 2 (IBM2) and Nonaka myopathy             |
| (NM) or distal myopathy with rimmed vacuoles (DMRV). Sialuria is an autosomal dominant               |
| disorder caused by a lack of feedback inhibition of GLCNE by CMP-NeuAc, resulting in                 |
| overproduction of NeuAc. It is characterized by an accumulation of free sialic acid in the           |
| cytoplasm and large quantities of neuraminic acid in the urine. Both IBM2 and NM/DMRV are            |
| autosomal recessive neuromuscular disorders characterized by adult onset, distal and proximal        |
| muscle weakness (especially in the legs) and a typical muscle pathology including filamentous        |
| inclusions and rimmed vacuoles.  |
|  |

Gene ID:

10020

## Application Details

| Application Notes: | IF(IHC-P) 1:50-200    |
|--------------------|-----------------------|
| Restrictions:      | For Research Use only |

## Handling

| Format:            | Liquid   |
|--------------------|--|
| Concentration:     | 1 μg/μL  |
| Buffer:            | Aqueous buffered solution containing 0.01M TBS ( pH 7.4) with 1 % BSA, 0.03 % Proclin300 and 50 % Glycerol.        |
| Preservative:      | ProClin  |
| Precaution of Use: | This product contains ProClin: a POISONOUS AND HAZARDOUS SUBSTANCE, which should be handled by trained staff only. |
| Storage:           | -20 °C   |
| Storage Comment:   | Store at -20°C. Aliquot into multiple vials to avoid repeated freeze-thaw cycles.                                  |
| Expiry Date:       | 12 months  |
