Target Details

| | Background: Glycoprotein VI (GPVI) is a membrane glycoprotein receptor for collagen found in |
|----------|---|
| | platelets. GPVI plays an important role in platelet procoagulant activity which may contribute to |
| | arterial and venous thrombus formation. GPVI is expressed in megakaryocytes and platelets. |
| | Patients deficient in GPVI suffer from mild hemorrhagic diathesis and their platelets fail to |
| | aggregate in response to collagen. There are three isoforms. |
| Gene ID: | 51206 |
| UniProt: | Q9HCN6 |
