| | Background: GPKOW is a potential RNA-binding protein consisting of one central G patch |
| | domain and two C-terminal KOW domains. T54 is a 476 amino acid protein belonging to the |
| | MOS2 family. It is a mammalian homolog of the Arabidopsis thaliana MOS2 (modifier of SNC1, |
| | 2) nuclear protein that is required for innate immunity. Similar to A. thaliana MOS2, T54 |
| | localizes to the nucleus and contains G patch and KOW domains, suggesting that T54 may play |
| | a similar role in mammalian innate immunity. |
