Background: Synonyms: G patch domain and KOW mots, G patch domain and KOW mots containing protein, G patch domain and KOW mots-containing protein, G patch domain containing 5, G patch domain containing protein 5, G patch domain-containing protein 5, GPATC5, GPATCH5, gpkow, GPKOW_HUMAN, Protein MOS2 homolog, Protein T54, SPP2, T54 antibody T54 protein.

Background: GPKOW is a potential RNA-binding protein consisting of one central G patch domain and two C-terminal KOW domains. T54 is a 476 amino acid protein belonging to the MOS2 family. It is a mammalian homolog of the Arabidopsis thaliana MOS2 (modifier of SNC1, 2) nuclear protein that is required for innate immunity. Similar to A. thaliana MOS2, T54 localizes to the nucleus and contains G patch and KOW domains, suggesting that T54 may play a similar role in mammalian innate immunity.
