|-------------|---|
| | Background: Cytokine that plays a crucial role in innate immunity of the epithelium, including to |
| | intestinal bacterial pathogens, in an autocrine manner. Stimulates the production of |
| | antibacterial peptides and proinflammatory molecules for host defense by signaling through |
| | the NF-kappa-B and MAPK pathways. Acts synergically with IL22 in inducing the expression of |
| | antibacterial peptides, including S100A8, S100A9, REG3A and REG3G. Synergy is also observed |
| | with TNF and IL1B in inducing DEFB2 from keratinocytes. Depending on the type of insult, may |
| | have both protective and pathogenic properties, either by maintaining epithelial homeostasis |
| | after an inflammatory challenge or by promoting inflammatory phenotype. Enhanced |
| | IL17C/IL17RE signaling may also lead to greater susceptibility to autoimmune diseases. |
