| | tightly packed core. All LRR repeats contain a variable segment and a highly conserved |

| | segment, the latter of which accounts for 11 or 12 residues of the entire LRR motif. ISLR2 |
| | (immunoglobulin superfamily containing leucine-rich repeat 2), also known as LINX (leucine-rich |
| | repeat domain and immunoglobulin domain-containing axon extension protein), is a 745 amino |
| | acid single-pass membrane protein that contains five LRR repeats, one Ig-like (immunoglobulin- |
| | like) domain, a LRRCT domain and one LRRNT domain. ISLR2 exists as a homomultimer and is |
| | essential for axon extension during neural development. The gene encoding ISLR2 maps to |
| | human chromosome 15q24.1. |
