Target Details

Background:	Synonyms: 38 kDa Mov34 homolog, COP9 constitutive photomorphogenic homolog subunit 5, COP9 constitutive photomorphogenic homolog subunit 5, COP9 signalosome complex subunit 5, COP9 signalosome subunit 5, COP9 subunit 5, COPS 5, COPS5, CSN 5, CSN5, JAB 1, Jun activation domain binding protein 1, Jun activation domain-binding protein, MGC3149, MOV 34, MOV34, SGN 5, SGN5, Signalosome subunit 5, CSN5_HUMAN. Background: The protein encoded by this gene is one of the eight subunits of COP9	
	signalosome, a highly conserved protein complex that functions as an important regulator in multiple signaling pathways. The structure and function of COP9 signalosome is similar to that of the 19S regulatory particle of 26S proteasome. COP9 signalosome has been shown to	
	interact with SCF-type E3 ubiquitin ligases and act as a positive regulator of E3 ubiquitin ligases. This protein is reported to be involved in the degradation of cyclin-dependent kinase inhibitor CDKN1B/p27Kip1. It is also known to be an coactivator that increases the specificity of JUN/AP1 transcription factors.
