	neuronal 4 protein, Leucine rich repeat transmembrane neuronal protein 4, Leucine-rich repeat		
	transmembrane neuronal 4 protein, Leucine-rich repeat transmembrane neuronal protein 4,		
	LRRT4_HUMAN, Lrrtm4.		
	Background: The leucine-rich (LRR) repeat is a 20-30 amino acid motif that forms a		
	hydrophobic / horseshoe fold, allowing it to accommodate several leucine residues within a		
	tightly packed core. All LRR repeats contain a variable segment and a highly conserved		
	segment, the latter of which accounts for 11 or 12 residues of the entire LRR motif. The LRRTM protein family plays a role in the regulation of various cellular events during nervous system development. Localizing predominantly to the nervous system, LRRTM family members are		
	known to exhibit synaptogenic activity. LRRTM4 (leucine-rich repeat transmembrane neuronal		
	protein 4) is a 590 amino acid member of the LRRTM protein family. Expressed in neuronal		
	tissues, LRRTM4 may play a role in the development and maintenance of the vertebrate		
	nervous system. A single-pass type I membrane protein, LRRTM4 contains 10 LRR repeats.		
	LRRTM4 is expressed as two isoforms produced by alternative splicing.
