	Background: This gene has been found to be recurrently rearranged in chromosomal		
	translocation with two other genes - baculoviral IAP repeat-containing protein 3 (also known as		
	apoptosis inhibitor 2) and immunoglobulin heavy chain locus - in mucosa-associated lymphoid		
	tissue lymphomas. The protein encoded by this gene may play a role in NF-kappaB activation.		
	Two alternatively spliced transcript variants encoding different isoforms have been described		
	for this gene. [provided by RefSeq, Jul 2008].
