Background: Mitogen-activated protein (MAP) kinase cascades are activated by various
extracellular stimuli including growth factors. The MEK kinases (also designated MAP kinase
kinase kinases, MKKKs, MAP3Ks or MEKKs) phosphorylate and thereby activate the MEKs (also
called MAP kinase kinases or MKKs), including ERK, JNK and p38. These activated MEKs in
turn phosphorylate and activate the MAP kinases. The MEK kinases include Raf-1, Raf-B, Mos,
MEK kinase-1, MEK kinase-2, MEK kinase-3, MEK kinase-4, ASK 1 (MEK kinase-5) and MAP3K6
(MEK kinase-6). MEK kinase-1 has been shown to phosphorylate MEK-1 via Raf-independent
pathway. Evidence suggests that MEK-3 is preferentially activated by MEK kinase-3 and that
MEK-4 is activated by both MEK kinase-2 and MEK kinase-3. MEK kinase-4 has been shown to
specifically activate the JNK path-way. ASK1 activates both MEK-4 and MEK-3/MEK-6
pathways.
