Background:	Synonyms: MORG1, WD repeat domain-containing protein 83, Mitogen-activated protein kinase
	organizer 1, MAPK organizer 1, WDR83
	Background: Molecular scaffold protein for various multimeric protein complexes. Acts as a
	module in the assembly of a multicomponent scaffold for the ERK pathway, linking ERK
	responses to specific agonists. At low concentrations it enhances ERK activation, whereas high
	concentrations lead to the inhibition of ERK activation. Also involved in response to hypoxia by
	acting as a negative regulator of HIF1A/HIF-1-alpha via its interaction with EGLN3/PHD3. May
	promote degradation of HIF1A. May act by recruiting signaling complexes to a specific
	upstream activator (By similarity). May also be involved in pre-mRNA splicing.
Gene ID:	84292
