#### Target Details

Synonyms: MPDZ, Multi PDZ domain protein 1, Multi-PDZ domain protein 1, multiple PDZ
domain protein, MPDZ_HUMAN.
Background: MPDZ is a 2,042 amino acid peripheral membrane protein that colocalizes with
SR-2C on the apical membrane of epithelial choroid plexus cells. Expressed in heart, brain,
placenta, liver, skeletal muscle, kidney and pancreas, MPDZ causes clustering of SR-2C, a
serotonin receptor, at the cell surface. MPDZ is member of the NMDAR signaling complex that
is involved in regulating AMPAR potentiation and synaptic plasticity in excitatory synapses. As a
tight junction protein in epithelial cells, MPDZ interacts with SSTR3, a G-protein-coupled
receptor, to regulate transepithelial permeability in a pertussis toxin sensitive manner. MPDZ,
along with Kir4.2, may form a complex with other proteins in the nephron and regulate ion
transport. MPDZ contains one L27 domain and thirteen PDZ domains.

Pathways:

Synaptic Membrane, Phototransduction
