Background:	Synonyms: ALP, hALP, KIAA1709, N acetyltransferase 10, N acetyltransferase 10 GCN5 related,

## Target Details

---

N acetyltransferase like, N acetyltransferase like protein, N-acetyltransferase 10, NAT10, NAT10\_HUMAN, NET43.

Background: Has protein acetyltransferase activity in vitro. Can acetylate both histones and microtubules. Histone acetylation may regulate transcription and mitotic chromosome decondensation. Activates telomerase activity by stimulating the transcription of TERT, and may also regulate telomerase function by affecting the balance of telomerase subunit assembly, disassembly, and localization. Acetylates alpha-tubulin, which may affect microtubule stability and cell division.
