## Target Details

	Background: Novel nuclear protein 1 (NNP-1), also known as RRP1-like protein or Nucleolar
	protein Nop52, is a 461 amino acid protein belonging to the RRP1 family. Localized to the
	nucleolus, NNP-1 has simian virus 40-type and bipartite nuclear localization signals and four
	coiled-coil domains within its C-terminal region. NNP-1 has been found to play an important
	role in the generation of 28S rRNA in the late processing steps of ribosome biogenesis. At the
	end of mitosis, nucleolar proteins assemble in a sequential order during the rebuilding of the
	nucleolus. NNP-1 assembles after Fibrillarin and C23, and simultaneously with B23 and POP1 in
	the prenucleolar body pathway.
