Application Details	
Gene ID:	10036
	required for the ligand-bound VDR-mediated transrepression of the CYP27B1 gene.
	complex, a chromatin-remodeling complex recruited by vitamin D receptor (VDR), which is
	involved in vitamin D-coupled transcription regulation via its association with the WINAC
	similarity). The CCR4-NOT complex functions as general transcription regulation complex. Also
	cells by bringing newly synthesized cbx proteins to heterochromatic DNA replication foci (By
	binds to histones H3 and H4. It may play a role in heterochromatin maintenance in proliferating
	chromatin precursor subsequent to DNA replication to complete the histone octamer. CHAF1A
	synthesized histones H3 and H4 to replicating DNA, histones H2A/H2B can bind to this
	in vitro. CAF-1 performs the first step of the nucleosome assembly process, bringing newly
	assembly in DNA replication and DNA repair. Assembles histone octamers onto replicating DNA
