Background:	<p>Synonyms: DKFZp781P1017, Lost on transformation 1, Lost on Transformation, LOT-1, LOT1, MGC126275, MGC126276, PLAG like 1, PLAGL1, PLAL1_HUMAN, Pleiomorphic adenoma gene like 1, Pleiomorphic adenoma gene like protein 1, Pleiomorphic adenoma-like protein 1, Tumor supressor ZAC, ZAC, ZAC tumor supressor, ZAC1, Zinc finger protein PLAGL1.</p> <p>Background: This gene encodes a C2H2 zinc finger protein with transactivation and DNA-binding activities. It has been shown to have anti-proliferative properties, and thus thought to function as a tumor suppressor. In addition, overexpression of this gene during fetal development is believed to underlie the rare disorder, transient neonatal diabetes mellitus (TNDM). This gene is imprinted, with preferential expression of the paternal allele in many tissues, however, biallelic expression has been noted in peripheral blood leucocytes. A recent study reports that tissue-specific imprinting results from variable utilization of monoallelic and biallelic promoters. Many transcript variants differing in the 5' UTR and encoding two different isoforms, have been found for this gene. [provided by RefSeq, Oct 2010].</p>
