	Background: RNA-binding protein that specifically bind the 3'-UTR of CDKN1A transcripts,
	leading to maintain the stability of CDKN1A transcripts, thereby acting as a mediator of the
	p53/TP53 family to regulate CDKN1A. CDKN1A is a cyclin-dependent kinase inhibitor
	transcriptionally regulated by the p53/TP53 family to induce cell cycle arrest. Isoform 1, but not
	isoform 2, has the ability to induce cell cycle arrest in G1 and maintain the stability of CDKN1A
	transcripts induced by p53/TP53. Also acts as a mRNA splicing factor. Specifically regulates
	the expression of FGFR2-IIIb, an epithelial cell-specific isoform of FGFR2. Plays a role in
	myogenic differentiation.
