| | pathway of protein degradation. RNF10 (ring finger protein 10), also known as RIE2, is an 811 |
|---------------------|--|
| | amino acid protein that localizes to the cytoplasm and contains one RING-type zinc finger. |
| | Existing as multiple alternatively spliced isoforms, RNF10 interacts with MOX-2 and is thought |
| | to regulate its transcription in schwann cells, possibly playing a role in myelin formation. The |
| | gene encoding RNF10 maps to human chromosome 12, which encodes over 1,100 genes and |
| | comprises approximately 4.5 % of the human genome. Chromosome 12 is associated with a |
| | variety of diseases and afflictions, including hypochondrogenesis, achondrogenesis, Kniest |
| | dysplasia, Noonan syndrome and Trisomy 12p, which causes facial developmental defects and |
| | seizure disorders. |
