	polymerase associated protein RTF1 homolog, RNA polymerase-associated protein RTF1
	homolog, RTF 1, RTF1, Rtf1 Paf1/RNA polymerase II complex component homolog,
	RTF1_HUMAN, rtf1L, YGL244W,
	Background: RTF1 is the the major histocompatibility complex (MHC) in the rat which contains
	genes that code for two class II histocompatibility antigens. RT1-B is an antigen of the RT1
	complex. It is a protein dimer consisting of an alpha and beta glycoprotein chain and is
	homologous to I-A and I-E genes, respectively, in the H-2 complex of the mouse. MHC Class II
	antigens are useful in studying T helper cell interaction with class II positive antigen presenting
	cells (dendritic cells, B cells, macrophages) and offer new possibilities for studying the
	development of T helper cells since these also stain stromal cells in the thymus.
