| | precursor. |
| | Background: SAA4 is a constitutively expressed protein belonging to the SAA family. It is a |
| | major acute phase reactant and an apolipoprotein of the HDL complex. The serum amyloid A |
| | (SAA) superfamily comprises a number of differentially expressed genes with a high degree of |
| | homology in mammalian species. SAA4, an apolipoprotein constitutively expressed only in |
| | humans and mice, is associated almost entirely with lipoproteins of the high density range. Its |
| | physiological function is unknown and its serum concentration has no relationship with those |
| | of other major apolipoproteins. The presence of SAA4 mRNA and protein in macrophage |
| | derived foam cells of coronary and carotid arteries suggested a specific role of human SAA4 |
| | during inflammation including atherosclerosis. |
